

Group 27 Battery Charge Rate from 50% Discharge with 7345 / 7445 Converter

— DC AMPS — DC VOLTS

Testing was performed with a *new* Group 27 deep cycle battery. 50% discharge was determined by a specific gravity of 1.225 terminal voltage at this point was 12.24VDC. Testing was performed in an ambient temperature of 20 Deg. C. Initial readings were taken as soon as the converter was powered on. This chart is provided for reference only and in no way represents all conditions, such as parasitic loads, battery manufacturer and age, ambient temperature, and other factors.
