ZINC RICH COATING

Zinc Rich and Zinc Flake Coatings are an excellent choice for improved corrosion resistance, management of torque values on fasteners, and elimination of hydrogen embrittlement concerns on high strength steels and springs.

Zinc Rich coatings are applied after fabrication, coverage of welds and stamping edges are assured and much higher levels of corrosion resistance are available when compared to traditional E-coat or zinc plated finishes.

PIONEER SOLUTIONS

Pioneer's Zinc Rich and Zinc Flake products can be applied in Dip Spin, Dip Drain, and Spray systems, offering a wide variety of finish options depending upon your project requirements for performance and cost. Pioneer offer's the very best coatings from Doerken and Magni, with many choices in primer/top-coat configurations to meet your finishing needs.

PERFORMANCE BENEFITS

- √ Increased Wear Resistance
- √ Excellent Corrosion Resistance
- √ Abrasion Resistance
- √ Strong Durability
- √ Environmentally Friendly

INDUSTRIES & APPLICATIONS

- √ Screws
- √ Fasteners
- √ Industrial & Automotive
