

TrakWear: Manage Your Apparel Matrix in Macola

by Harvest Ventures Inc.

Easily manage your seasons, styles, colours, size matrix, in Macola

If you are a manufacturer or distributor in the shoe or apparel industry and need to track product attributes such as size matrix, colour, style, width, seasons, etc., TrakWear can help you to manage this with ease.

By using TrakWear as part of your Macola ERP solution, you have the ability to manage your products through the entire manufacturing and/or distribution cycle (purchase orders, allocating to inventory, tracking, sales orders, billing) according to the unique attributes that apply to your products.

Business Benefits

Sales analysis and identification of trends

In the highly competitive shoe and apparel industry, it's important to have the ability to easily identify trends to ensure you have enough product on hand and avoid disappointed customers, lost sales and inventory shortages.

In addition, you need to carefully monitor sales and stock levels to avoid the expense of having excess inventory. TrakWear gives you constant visibility

with easy to read reports and on-screen data.

Integration with Industry Standard UPS Barcodes and Software

The apparel industry faces many demands when it comes to technology integration. TrakWear will work with UPS barcodes, EDI and eCommerce applications with little to no additional configuration in most cases.

Ease of Use

The TrakWear tool is accessed via desktop shortcut and from buttons within Macola screens.

Users can operate the application with simple point and click actions.

The reports are displayed in an easy to read format for quick information access.

To further simplify, screens can be configured based on user requirements.

How it works

Create & Maintain Product Codes

TrakWear's product set-up and maintenance functions are accessed from your desktop. From there, you can ►

Features:

Allocate orders between current inventory and open WIP

Integrates with UPS barcodes, EDI and eCommerce software

Purchase, track, order and allocate products according to attributes, some examples:

- Size
- Style
- Colour
- Dim
- Style-colour-dim
- Ratio
- Season
- Collection
- Group
- Line

Easy to use:

- Point and click screen functionality
- Drill down into more detail
- Flexible screen configuration

TrakWear: Manage Your Apparel Matrix in Macola

by Harvest Ventures Inc.

Easy to use interface and reporting features to quickly identify trends

set-up new product codes and maintain or delete existing codes. The interface offers consistent functionality with appropriate fields for each attribute.

Purchasing Inventory

TrakWear is accessed directly from Macola's Purchase Order (PO) Entry screen. By clicking the "TrakWear" button, a new window appears allowing you to select the product you wish to order and enter the quantities for each attribute (e.g. order a red shirt in various quantities of size (S, M, L, XL).

Once complete, the products will appear as individual line items in the PO screen.

Entering Sales Orders

In the "Enter Orders" screen of Macola, the "TrakWear" button will launch a new window allowing you to select a product and enter the quantity ordered for each attribute (e.g. size). From this screen, you can also see the current inventory levels (on hand and available).

Billing Entry

In the "Billing Entry" screen within Macola, the "TrakWear" button will launch a new window where you can

enter the actual quantity shipped versus the quantity ordered as well as view current inventory levels and other appropriate details.

Reporting

TrakWear comes with four reports:

- Stock status
- Open order report
- Invoice printing
- Pick ticket

The reports are accessed from the desktop utility and are easily generated by selecting the report from the menu, entering the appropriate information (dates, etc.) and clicking "OK".

Focus on the next big trend, not managing your software!

TrakWear fills a functionality gap that most ERP systems do not accommodate for the shoe and apparel industry. By using this simple utility in conjunction with your Macola ERP system, you can streamline and improve visibility into your inventory so that you have more time to focus on making sure you're on top of the next seasonal trend!

Compatible with:

- Macola 10
- Macola ES
- Progression

Benefits:

Identify sales patterns/trends

Actively monitor and manage inventory levels without lengthy printouts

Quickly detect shipment delays and problems

Accurate available-to-ship dates (improve customer service)

Quick visibility into inventory levels during sales and purchase order entry
