### OK-IG200

## WHAT IS CELLIANT®?

Celliant is an infrared yarn and proprietary fiber that is loaded with a potent mix of thermo-reactive minerals. Powered by our own body heat, it is more hybrid engine than textile. It recycles and converts escaping body heat into something that gives the body a measurable boost—infrared energy. The FDA has determined Celliant® to be a medical device and general wellness product. Celliant® fibers have been clinically proven to increase tissue oxygen levels. In gloves, this results in increased warming and temperature regulation of the hand.
