**COPIER/LASER PRINTING TIPS**

*paper is grain short- load paper using this orientation for better results*

---

**LOADING MACHINE**
Fan material thoroughly before loading into machine. This helps to aerate and separate sheets that have been compacted during the packaging and shipping process. Paper is short grain.

---

**INKJET PRINTERS**
Most inkjet printers use water based inks which don’t adhere to *Rite in the Rain*. If you only have access to an inkjet printer, it’s recommended that you make an inkjet master copy then create *Rite in the Rain* duplicates on a photocopier.

---

**FUSER SETTINGS**
Use “standard paper” setting on your copier. *Rite in the Rain* is not a plastic. There is no risk of melting in your machine.

---

**STORAGE**
Always keep stock boxed in factory packaging until ready to use. This keeps your material at the quality specifications held during the manufacturing process. Store material flat and at room temperature.

---

**SHELF LIFE**
To assure a long and unlimited shelf life, keep your product in the original packaging away from moisture and sunlight.

---

**CLEANING**
As with most papers, use a 99% pure Isopropyl Alcohol solution to clean your copier’s feed and separation rollers to help prevent double feeding.

---

**RECYCLING**
*Rite in the Rain* is a wood-based paper product that is to be recycled with regular office paper stock. No special recycling process needed.
