

SmD3

Antigen Specification

Product Number: 12000

Description:

Human small nuclear ribonucleoprotein D3 polypeptide (SNRPD3; SmD3). Recombinant antigen for research use or manufacturing only.

Immunological function:

Binds IgG-type human auto-antibodies.

Origin:

Recombinant. Expressed by recombinant baculovirus (*Autographa californica* multiple nuclear polyhedrosis virus; AcMNPV) infection of *Spodoptera frugiperda* Sf9 insect cells. Expression conditions allow for introduction of symmetrical arginine dimethylation, thereby creating the main SmD3 autoepitope.

Expression construct:

Full-length cDNA coding for the human SmD3 protein fused to a hexa-histidine purification tag.

Biochemical tests:

SDS-PAGE (purity > 80%); Western blot with anti-Sm autoantibody-positive sample.

Calculated molecular weight of unmethylated SmD3 precursor:

15 kDa

Calculated isoelectric point of unmethylated SmD3 precursor:

pH 10.33

Immunological tests/Functionality:

Standard ELISA test (checkerboard analysis of positive/negative samples); immunodot analyses with positive/negative samples.

Recommended buffer/storage and handling conditions:

Recommendations for storage buffer: neutral to slightly alkaline pH and 20% glycerol as cryoprotective agent. Storage conditions: -70°C or below. Repeated freeze/thaw cycles should be avoided.

Coating concentration:

0.4-0.8 µg/mL (depending on the type of ELISA plate and coating buffer). Suitable for labeling of functional groups.
