RV SLIDE OUT SEALS

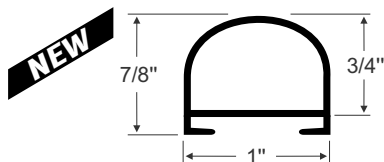

Slide-outs seals can be the most important weatherstripping found on an RV! Worn or poor-quality seals on slide-outs can easily lead to extensive and expensive damage. Generally consisting of a 'wiper' and a round seal called a 'bulb', the wiper seals the gap between the side of the RV body and the slide-out when the slide-out is extended. The bulb makes a seal between the body of the RV and the outside wall edge of the slide-out when the slide-out is retracted. Steele Rubber Products offers you precision made high quality rubber seals in a number of profiles to fit just about any configuration.

RV SLIDE OUT SEALS

When choosing slide-out seals, be sure to note the type your RV has:

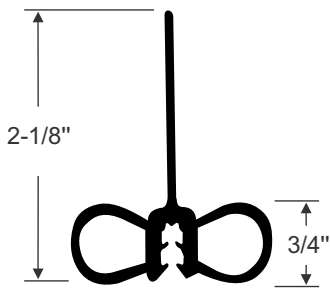

- Is it one or two piece?
- How is it installed (glued on, pushed on, or does it utilize an adhesive tape)?
- What are the dimensions of the seals and the tracks they slide into and/or the surfaces that they adhere to (length, width and height)?

Note: in some cases, manufacturers use white rubber which soils easily and does not have the same UV protection as black rubber. Without this protection, the rubber will deteriorate and lose its seal. Our goal is to provide you with a part that performs better and lasts longer- this is why the vast majority of our seals are made of high quality black rubber.
