Procedure Diagram 1. Remove the front cover (1) Disconnect electrical power to the unit (2) Turn off gas and water (3) Remove 4 screws (4) Remove drain 2 valves and drain unit completely (5) Remove the cover - circuit board Cover - Circuit Board 2. Disconnect the connectors from the circuit board and remove OD model has only a screw the ground wire, the circuit board of the upperside (1) Disconnect the connectors from circuit board (2) Remove the ground wire DV model; 3 ground wires OD model; 2 ground wires (3) Remove the circuit board; there are 2 screws, one on the right-side and middle-upper of the circuit board. Let the circuit board hang outside of the unit 3. Unplug all wires that attach to the wiring harness and the body of the water heater (1) Unplug Flame Rod and Ignition Plug (2) Loosen the wire anchor from right side of the case and unplug the freeze prevention heater, thermal fuse (2) (3) Unplug all wires that attach to the wiring harness except the water servo - main (4) *DV model only Unplug the freeze prevention heater, the thermistor - exhaust. Release the wire Water Servo - Main Wire clamp clamps

- 4. Remove the manifold plate
 - (1) Remove 3 big silver screws on the manifold plate that attach the manifold to the burner
 - (2) Remove 2 smaller silver screws from the manifold plate that attach the manifold to the gas valve
 - (3) Remove the manifold plate and unplug the connector from gas solenoid valves (3)

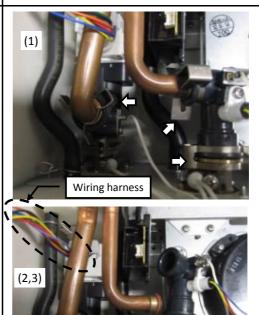

Diagram

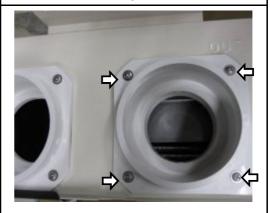

- 5. Disconnect water pipes from the water flow sensor and the water servo main
 - (1) Remove "C" Clamp (3)
 - (2) Remove the water flow sensor
 - (3) Make sure to feed the wires from the water servo main around the outlet water pipe as shown in bottom diagram

Water Flow Sensor

- 6. Remove the exhaust flue from top of the unit *DV model
 - (1) Disconnect the venting from the unit
 - (2) Remove 4 screws and pull the flue off of the unit and set aside

Diagram

- 7. Remove the drain hose from Stainless Steel Heat Exchanger(SS HE)
 - (1) Remove 1 spring clamp
 - (2) Remove the drain hose from SS HE and pull the hose out as shown in the right diagram (2)

- 8. Remove the cover and route wires water level electrode
 - (1) Remove the cover water level electrode from the condensate container
 - (2) Unplug the water level electrode wiring, the high limit switch and the thermistor heat exchanger wiring harness as shown in diagram (2)
 - (3) Make sure to feed the wires from the water level electrode wiring harness outside the case as shown in diagram (3)

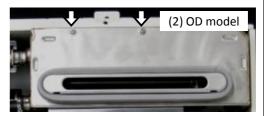

Diagram

- 9. Remove the heat exchanger from the case
 - (1) Remove the 2 set screws on the bottom of the burner
 - (2) Remove the upper left and right set screws near the top of the case (In OD Model, the screws will be at the top of the case) (support bottom of assembly)
 - (3) SS HE, Copper Heat Exchanger(CU HE), Burner, and Fan will come out in one section. Remove from the

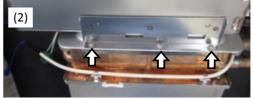

- 10. Separate the SS HE from the CU HE
 - (1) Remove 2 screws on the bracket between the SS HE and the CLLHE
 - (2) Remove the 3 screws that located on the back side of the SS HE
 - (3) Remove "C" clamp
 - (4) Separate the SS HE from the CU HE

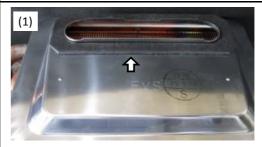

Diagram

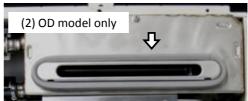

11. Replacing the SS HE

Note: If you are not replacing the SS HE then you can skip this step and set the SS HE aside. $\label{eq:sspecial} % \begin{subarray}{l} \end{subarray} % \be$

- (1) Remove old gasket between the SS HE and the CU HE Exhaust Box and replace with new one
- (2) *OD model only

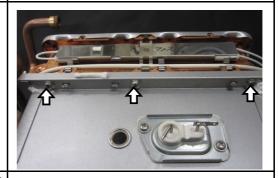

Remove the gasket on the front of the SS HE and place on new one

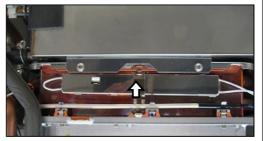

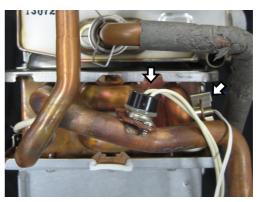

12. Replacing the CU HE

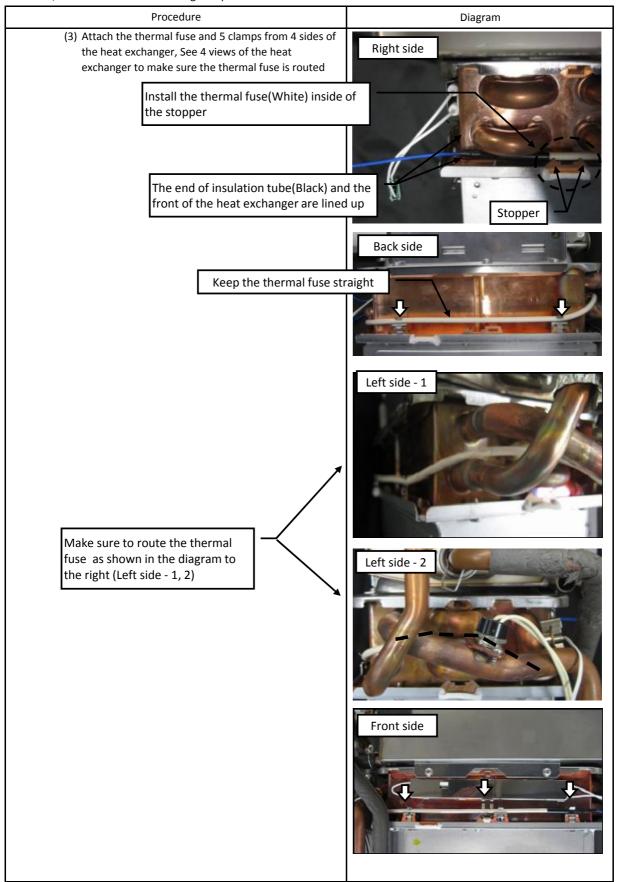

- (1) Remove 10 screws holding the burner to the CU HE
- (2) Separate the burner from the CU HE

- 13. Remove heat exchanger components from old heat exchanger and put on new heat exchanger
 - (1) Front side: Freeze Prevention Heater
 - (2) Left side: High limit Switch and Thermistor Heat Exchanger
 - *Replace new O Ring fot the thermistor heat exchanger

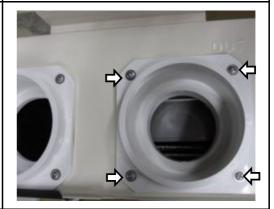

Procedure Diagram (4) *DV model only Place the new freeze prevention heater with one that Left side of HE was shipped in the heat exchanger kit. Wrap the freeze prevention heater around inlet pipe to the CU HE. 14. Replace gaskets (1) Remove old burner gasket and replace with new one 15. Place new O Rings on new CU HE (1) (1) Inlet to the CU HE (2) Outlet from the CU HE

NRC661A, NRC711 Series Heat Exchanger Replacement Procedure Procedure Diagram 16. Reattach Burner, CU HE, and SS HE (1) (1) Attach the inlet pipe to the CU HE with the "C" Clamp. Make sure to insert the pipe in all the way before attaching "C" Clamp. (2) Attach 3 screws that located on the back side of the SS HE to hold the SS HE to the CU HE (3) Attach 2 screws on the bracket between the SS HE and the CU HE (4) Attach 10 screws around perimeter of the burner and the CU HE (2) 17. Replace the assembly back inside the case (1) (1) Secure the 2 set screws on the bottom of the burner (2) Secure the upper left and right set screws near the top of the case (In OD model, the screws will be at the top of the case) (2) DV model (2) OD model

18. Replace the flue from top of the unit *DV model only

- (1) Attach the flue to the unit and secure the 4 screws
- (2) Reconnect the venting to the unit

Diagram

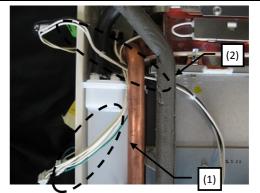

19. Reconnect water connections

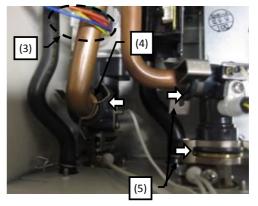

(1) Maintain the high limit switch, the thermistor - heat exchanger and the water level electrode wiring harness as shown in diagram (1)

(2) *DV model only

Maintain the freeze prevention heater and the thermistor - exhaust wiring harness as shown in

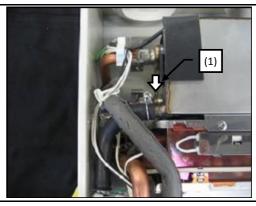

- (3) Maintain wiring harness as shown in diagram (3)
- (4) Insert the pipe from the CU HE to the water servo main and attach "C" clamp
- (5) Insert the water flow sensor to the inlet water connection and attach "C" clamp. And then insert the water inlet pipe to the water flow sensor and attach "C" clamp.

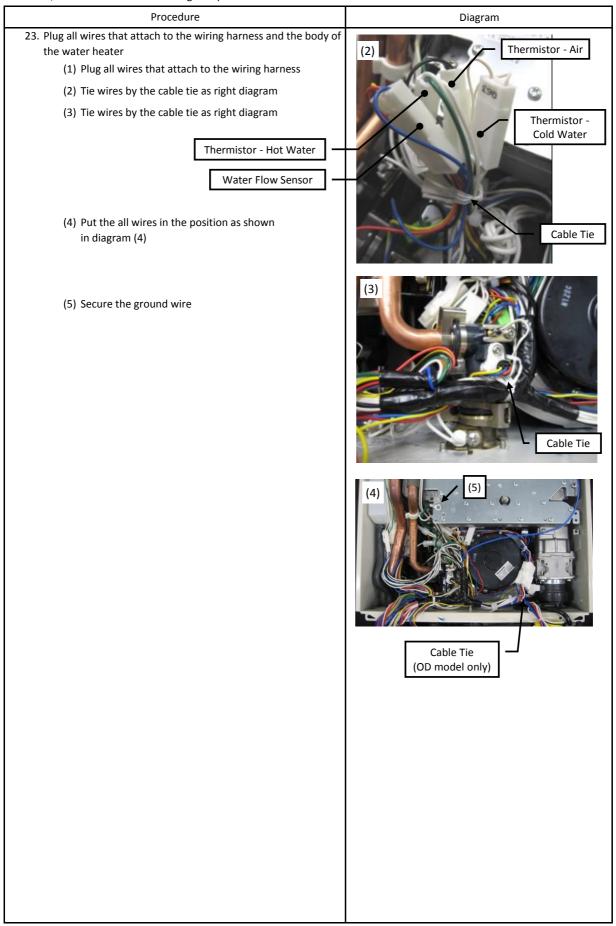

20. Replace the drain hose to the SS $\ensuremath{\mathsf{HE}}$

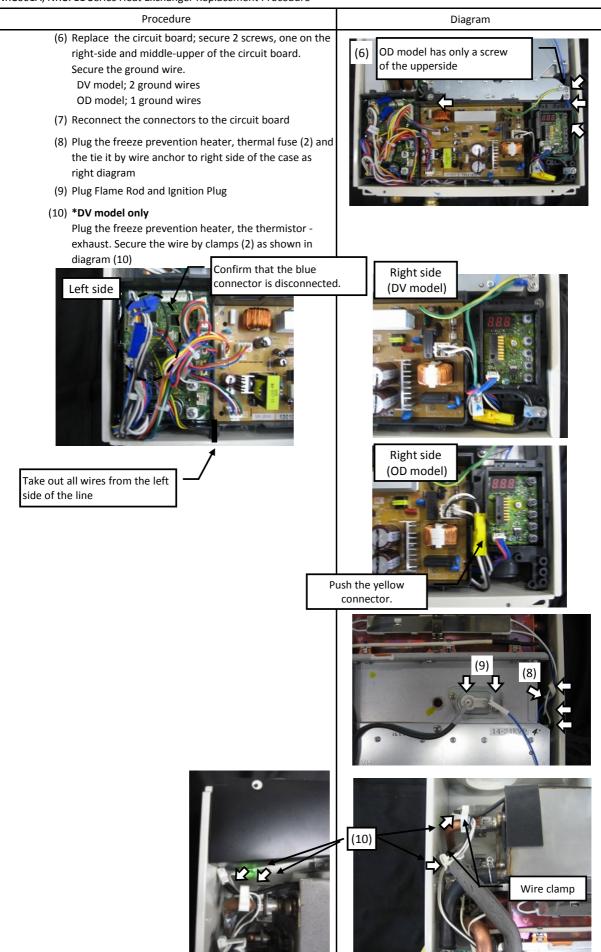

(1) Replace the drain hose to the SS HE and reattach 1 spring clamp as right diagram (1)

NRC661A, NRC711 Series Heat Exchanger Replacement Procedure Procedure Diagram 21. Replace the manifold plate (1) Plug the connector to gas solenoid valves (3) as right (2) Confirm that there is O-Ring before replace the manifold plate (3) Replace 2 smaller silver screws from the manifold plate O & BL GY & BL that attach the manifold to the gas valve wire wire (4) Replace 3 big silver screws on the manifold plate that wire attach the manifold to the burner (5) Hand tighten 5 screws equally (2) (4)22. Check for water leaks (1) Replace drain 2 valves (2) Turn on cold water shut off valve slowly (check for leaks around "C" clamps)

(3) If you get leaks shut off water and re-secure "C"

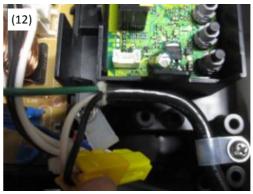

- (11) Replace the cover water level electrode to the condensate container
- (12) *DV model only

 Reinstall power supply cord as right diagram
- (13) Put all wires as the diagram

| Procedure | Diagram |
|---|---|
| (14) Replace the cover - circuit board | Cover - Circuit Board |
| 24. Check for gas leaks and doing trial operation | |
| (1) Turn on gas | |
| (2) Turn on the unit. Check for leaks around manifold plate and joining areas. For example - Between the burer and the CU (3) If you get leaks shut off gas, water and re-secure leaking points | |
| 25. Replace the front cover | |
| (1) Secure the front cover with 4 screws | ◆ ANAMORE ANAMORE THE PROPERTY OF THE PROPE |
