

BioFX™ Chemiluminescent Sensitive Plus HRP Microwell/Membrane Substrate

Product insert

Product number:

LERI-0110-2C (110 mL)

Custom Sizes Available

Components:

- 1) Chemiluminescent Sensitive Plus Luminol-Reagent A (LERA)
- 2) Chemiluminescent Sensitive Plus Reaction Buffer-Reagent B (LERB)

Product use:

BioFX™ Chemiluminescent Sensitive Plus HRP Microwell/Membrane Substrate should be used for the sensitive detection of peroxidase in microwell and membrane blotting applications.

Product stability and storage:

Product stability	18 months from the date of manufacture.
Storage	Store at 2-8°C in the original container and protected from light.

Recommendations for use:

- 1) Prepare the substrate by mixing 1 mL of Chemiluminescent Sensitive Plus Luminol-Reagent A (LERA) with 1 mL of Chemiluminescent Sensitive Plus Reaction Buffer-Reagent B (LERB).
 - The 1:1 ratio can be used to make desired volumes of substrate.
- 2) Mix the solutions well. The mixture of the two components is stable for several hours at room temperature when protected from light.

Additional considerations:

The substrate is very sensitive and great care must be taken to optimize the individual assay components (antibodies, conjugates, solid phase, etc.) to minimize background reactivity associated with nonspecific immunochemical reactions.
