Mass Credit Card Processing

by Harvest Ventures Inc.

Create Macola cashflow entries from your eCommerce orders

Are you seeing more requests from your customers to pay for their purchases via credit cards? We have good news - you're not alone.

Along with a desire to pay via credit card, a growing number of businesses today are noticing a demand by customers for more varied methods of payments. Customers are asking to pay for their purchases using multiple credit cards or even with multiple forms of payment, such as a combination of cheque and credit card.

The Solution:

Harvest Ventures' credit card processing utility allows your company to accept and manage credit card transactions in Macola safely and easily.

For companies that process a large number of transactions, the utility can bulk-process multiple transactions from a single screen. Credit card payments are recorded in Macola against your orders, eliminating manual entry and reconciliation.

For businesses that use credit card pre-authorization, this tool is especially useful for completing the payment in bulk while simultaneously updating the cash flow accounts within Macola.

This tool compliments eCommerce solutions by making OE cashflow entries against the order (if applicable). Additionally, Credit Card Processing can accept multiple credit cards and/or forms of payment for one order.

Business Benefits:

Flexibility

The Credit Card Processing utility offers flexibility in terms of when a credit card is authorized and/or pre-authorized.

Secure Data Storage

The tool allows information to be stored until merchandise has been shipped so that re-keying is not required. Integration with Macola means that data is stored within Macola tables for ease of retrieval and tracking. Additionally, Credit Card Processing enables users to safely manage credit card data in an encrypted format.

Features:

From the Macola Order Entry screen, you can:

Capture and verify credit card information

Authorize/pre-authorize payments

Apply multiple forms of payment and multiple payments of cash/cheque/credit card to an order

Multiple transaction types are supported including:

- Pre-authorization
- Purchase
- Customer Payments
- Re-Authorize

Data can be imported from any third party website (great for eCommerce)

Credit card information can be captured without creating transactions in Macola.

Full integration between credit card charges and Macola cash receipts

Supports multi-currency

Mass Credit Card Processing

by Harvest Ventures Inc.

Eliminate manual processing of individual credit card transactions

Multiple Payment Options

Credit Card Processing can accept multiple credit cards and/or forms of payment for one order. All major credit cards are accepted which means that you will no longer require a separate POS terminal and phone line.

How It Works

In the initial setup, you can set up the appropriate accounts to reconcile your Macola accounts with the credit card tool.

This tools allows you to set up your users with the appropriate access to complete their role in the process.

You will also be able to set up connections to your merchant accounts (with a merchant being the bank or company that processes the credit card payment).

Many customers choose to integrate the credit card utility into their Order Entry module within Macola. To do this, purchase of the flexibility module is required. Integration with Macola allows you to easily enter a customer's credit card information against their account. From the OE module, users can run pre-authorizations and accept multiple credit card payments and multiple forms of payment.

A popular feature of this utility is its ability to process credit card transactions in bulk. This is great for companies who import orders from their eCommerce sites into Macola as the utility will both process the credit card transaction and record the payment against the order in Macola. This saves users several manual, time consuming steps, allowing employee time to be distributed more effectively.

The Credit Card Processing utility is a custom tool developed by Harvest Ventures and comes complete with user help documentation. Our approach to customizations is independent of the back office database version to allow for hassle-free updates to your base ERP application.

Compatible with:

- Macola 10
- Macola ES

Benefits:

Reduce labour and operating costs with less data entry and faster order processing

Provide easier reporting and reconciliation of credit card transactions

Eliminate separate POS terminals and phone lines

All major credit cards are accepted

Process multiple credit card payments or multiple payment types at once and apply it to a specific order

Easily track and reconcile credit card payments to your bank account
