System Tested and Certified by NSF International against NSF®/ANSI Standard 55 for Disinfection Performance, Class B

Model MP36C
12 GPM
ABOUT US

Since 1963, Atlantic Ultraviolet Corporation® has pioneered the discovery and development of beneficial uses of ultraviolet energy. Over the years these efforts have led to the development of valuable, cost effective and environmentally sound techniques and products now known and respected throughout the world.

The UV Application Specialists at Atlantic Ultraviolet Corporation® assist customers in the selection of germicidal lamps and equipment. Their specialized knowledge is a valuable resource in formulating effective and cost-conscious ultraviolet solutions. Extensive inventories and a dedicated staff enable Atlantic Ultraviolet Corporation® to fulfill its commitment to provide fast deliveries and responsive customer service.

GERMICIDAL ULTRAVIOLET

Ultraviolet water purification is a unique and rapid method of water disinfection without the use of heat or chemicals.

MIGHTY★PURE® Ultraviolet Purifiers utilize germicidal ultraviolet lamps that produce short wave radiation lethal to bacteria, virus, and other microorganisms present in water.

Through the years ultraviolet technology has become well established as a method of choice for effective and economical water disinfection.

MIGHTY★PURE® Ultraviolet Water Purifiers are the ideal solution for an ever growing range of water treatment applications.

(For larger capacities please refer to our SANITRON® and MEGATRON® Ultraviolet Water Disinfection Catalogs)
The water enters the purifier and flows into the annular space between the quartz sleeve and the chamber wall.

2. Translucent sight port provides positive indication of germicidal lamp operation.

3. Water leaving the purifier is instantly ready for use.
SPECIAL FEATURES

**Quick Lamp Change**
Exclusive EASY-OFF™ End Cap enables effortless lamp replacement without shut down of water pressure or drainage of tank. No tools required.

**Sight Port Plug**
Visible glow provides positive indication of germicidal lamp operation.

**FUSED CRYSTAL CLEAR™ QUARTZ SLEEVE**
Ensures optimum lamp output at normal potable water temperatures. (See interior detail page 3.)

**INSTALLATION & MAINTENANCE**
The purifier is installed horizontally as close as possible to the point of use. Connection of the inlet and outlet to water supply and insertion of power plug into 3-wire grounded GFCI outlet is all that is required.

Ordinary maintenance consists of routine cleaning of the quartz sleeve once monthly or more frequently where conditions dictate. Lamp replacement is recommended every 10,000 hours of operation (approximately 14 months of continuous service).

---

**Flow Control Valves**
Included with NSF Certified models MP36C and MP49C

**NsF®**

**Drain Plug**
Convenient, in-place drainage of purifier chamber.

**Type 316 Stainless Steel Construction**
Stainless steel chamber is electropolished and passivated for an attractive finish and dependable service.

**STER-L-RAY® Germicidal Ultraviolet Lamp**
Utilized in each MIGHTY®PURE® Water Purifier, providing the utmost in quality, sustained output and longevity (See interior detail on page 3).
The **GUARDIAN™** Ultraviolet Monitors are available in three models: Analog, Digital, and Remote. They can either be purchased and installed with a UV water purifier, or at a later date for an existing installation.

The **GUARDIAN™** Ultraviolet Monitor visually indicates the level of germicidal ultraviolet energy that penetrates the quartz sleeve and water within the water purifier. The use of a ultraviolet monitor is recommended by the United States Public Health Service in “Criteria for the Acceptability of an Ultraviolet Disinfection Unit.”

**GUARDIAN™** Ultraviolet Monitors will detect reduction of ultraviolet levels due to:

- Fouling or deposits on the quartz sleeve.
- Poor ultraviolet transmission through the water. Color, turbidity, and organic or other impurities in the water can reduce or interfere with the transmission of ultraviolet rays.
- Lamp outage or ballast failure.
- Depreciation of the lamp output due to usage or other cause. Lamp output gradually depreciates with use. Lamp replacement is recommended once a year or every 10,000 hours.

All **GUARDIAN™** Ultraviolet Monitors provide outputs to control the operation of an optional **Promate™** Solenoid Valve and/or optional **Promate™** Audio Alarm.

**Analog** - Direct Mount **GUARDIAN™** Ultraviolet Monitor is available in two voltage configurations: 120v 50/60Hz and 220–240v 50/60Hz, and can be mounted directly to the water purifier using a standard quartz probe.

**Digital** - Direct Mount **GUARDIAN™** Ultraviolet Monitor is available in two Low Voltage Models: a 12v Model, and a 110/220v Model which uses a multi-plug configuration 12v adapter to operate. This model also provides several outputs for remote monitoring of the water purifier operation:

- 4–20mA Output: Provides current for remote display of ultraviolet intensity.
- Dry Contacts: Provide contacts for remote indication of ultraviolet trip levels.
- 12v DC Output: Provides power for a low-voltage external audio alarm.
- RJ45 Modular Jack Adapter and RJ45 Modular Cable

**Digital Remote** - Remote Mount **GUARDIAN™** Ultraviolet Monitor is intended for use in locations away from the water purifier it is monitoring. In all other respects, the remote monitor operates in the same manner as the standard Digital **GUARDIAN™** Ultraviolet Monitor.

**GUARDIAN™ ASSIST Ultraviolet Monitor Extension** - Designed to remotely indicate the intensity level displayed on the **GUARDIAN™** Ultraviolet Monitor.

- Easy installation, no tools required
- Mounts on the sight port plug
- Operates on a 9v battery
- Monitors the visible light emitted by the ultraviolet lamp (does not monitor the ultraviolet intensity)
- Warns of lamp or power failure
- Produces a high frequency tone, pulsed at two to three cycles per second
- Available with Dry Contact for connection to PLC
- Optional Remote Sounder available
- Optional 120v 60Hz Power Adapter available

The **SENTRY™** Safety Sensor provides constant monitoring of the water purifier’s ballast and germicidal lamp operation to give an indication of ballast and germicidal lamp status. The **SENTRY™** Safety Sensor is capable of operating an optional **Promate™** Audio Alarm and/or **Promate™** Solenoid Valve.

- Easy installation - Plug **SENTRY™** into an electrical outlet, and then plug water purifier into **SENTRY™**
- Operates optional **Promate™** Solenoid Valve and/or **Promate™** Audio Alarm
- Warns of lamp failure and is easily adaptable for use with other water purifier brands
- Available for 120v 50/60Hz and 220v 50/60Hz water purifiers operating with electronic ballasts

**Options may either be obtained when purchase of MIGHTY • PURE® model is made, or added at a later date. For further details, visit Ultraviolet.com or BuyUltraviolet.com.**
ULTRAVIOLET DOSAGE

Germicidal lamps provide effective protection against microorganisms. A small cross-section is shown below.

When used as directed to disinfect clear water, MIGHTY*PURE® Water Purifiers provide an ultraviolet dosage in excess of 30,000 microwatt seconds per square centimeter (µWSec/cm²).

* Nominal Ultraviolet dosage (µWSec/cm²) necessary to inactivate better than 99% of specific microorganism. Consult factory for more complete listing.

OPERATING CHARACTERISTICS

Approximately 95% of the ultraviolet energy emitted from STER-L-RAY® germicidal lamps is at 254 nanometers, the region of germicidal effectiveness most destructive to bacteria, mold, and virus.
STER-L-RAY® Germicidal Lamps are shortwave, low pressure tubes that produce ultraviolet wavelengths lethal to microorganisms.

STER-L-RAY® Germicidal Lamps are well-suited to applications requiring high ultraviolet intensity such as water purification.

STER-L-RAY® Instant Start Germicidal Lamps utilize a coil filament on each end which operates hot. Lamp life is governed by the life of the electrodes and is affected by the frequency of starting.

STER-L-RAY® Preheat Germicidal Lamps are operated by a preheat-start circuit that employs an economical ballast. The preheat circuit requires four electrical connections per lamp and a slight to moderate delay is needed to start the lamp.

STER-L-RAY® and the STER-L-RAY® logo are trademarks of Atlantic Ultraviolet Corporation®.

CAUTION: Exposure to direct or reflected germicidal ultraviolet rays will cause painful eye irritation and reddening of the skin. Personnel subject to such exposure must wear suitable faceshield, gloves and protective clothing.

Hg - LAMP CONTAINS MERCURY, manage in accord with disposal laws, see: LampRecycle.org.

1 Wattage is lamp watts only and does not include ballast loss (approximate).

2 Maximum rated output at 254 nanometers.

The lamps listed above have been especially developed and are recommended for use with MIGHTY*PURE® Water Purifiers.

All STER-L-RAY® lamps used in MIGHTY*PURE® purifiers are low pressure type which afford the maximum efficiency in producing the required germicidal rays. In addition, has advantage of high efficiency and low power requirements.
STANDARD MODELS

All inlets and outlets are male pipe threads.

Maximum recommended operating pressure for all purifiers is 100 PSI

- Pressure drop at maximum recommended flow rate is 5 PSI or less
- Flow rates are based on Maximum Concentration Levels
- All data shown reflects 120 Volt 50/60 Hz operation
- MIGHTY+PURE® purifiers are also available in 220 Volt 50/60 Hz and 12 and 24 Volt DC
- MIGHTY+PURE® is available for operation on public power supplied throughout the world
- Consult factory with specific power requirements

- Soft Drinks
- Fruit Juices
- Bottling Facilities
- Edible Oils
- Liquid Sugar
- Sweeteners
- Water Based Lubricants
- Dairy Processing
- Cistern Applications
- Mollusk Hatcheries
- Water Preserves
- TOC Reduction
- Ozone Reduction
APPLICATIONS FOR ULTRAVIOLET WATER PURIFICATION

The unique advantage of UV purification is that nothing is added to the water. When chemical methods of treatment are used, there may be handling problems, taste and odor problems, and undesirable chemical reactions with substances present in the water.

This difference is most significant when producing water for:

- Drinking or swimming
- Processing foods and bottled beverages
- Manufacturing cosmetics or pharmaceuticals
- Hospitals and research institutions
- Tertiary treatment of municipal or industrial wastewater

The Versatility of UV Purification

UV purification provides germ-free potable water for home, institutional and municipal use, as in the following applications.

- **Water wells**: bacterial contamination of wells is unpredictable and may occur from seepage of surface water or sewage.
- **The outlet side of water cisterns**: most cisterns foster the proliferation of bacteria in untreated water.
- **Swimming pools**: to control bacteria, algae and slime formation. It avoids the undesirable effects of heavily chlorinated swimming pool water by allowing substantial reduction of the use of chlorine.

UV purification provides bacteria-free food process water without the use of germicides, oxidants, algaecides or chemical precipitants; particularly useful in the following applications where chlorine adversely affects flavor.

- **Brewery, winery, soft drink, and water bottling industries**: where biological purity of the water must be absolutely maintained in order to ensure product quality.
- **Dairy products**: for safeguarding against spoilage of cottage cheese and butter; certain psychrophilic bacteria are resistant to chlorine treatment.
- **Sterile washwater**: to guard against waterborne bacteria spoilage where vegetable, fruits, meats, fish and other products must be washed in water before packaging.

UV purification is particularly useful in the following applications where chlorine-free, de-ionized and/or carbon filtered water are extensively employed. Unattended carbon filters and ion-exchange tanks act as incubators for bacteria accumulation.

- **Electronics**: in conjunction with de-ionized and high purity water systems.
- **Pharmaceuticals and cosmetics**: strict water treatment standards are necessary for strict maintenance of product’s quality control.
- **Biological laboratories**: sterile water is required for testing and research work.
- **Hospitals**: provides ultra-pure water on demand for maternity labor and delivery areas, pathology labs, etc.

In industrial pollution control, UV purification affords an excellent end-treatment.

- **Wastewater control systems**: for selective use as a tertiary treatment for bacteria destruction after removal of chemicals and other objectionable ingredients.
